Ministry of Health and Family Welfare
Government of India

ROLE OF HEALTH WORKERS

Universal Screening and Control Non Communicable Diseases (Diabetes, High Blood Pressure and Common Cancers)

Chalo
Banaayein
Swasth Bharat

For all adults of 30 years and above

Step 1

ASHA will undertake the following tasks during home visit:

- List all adults 30 years and above.
- Prepare family folder and complete the Community Based Assessment Checklist (CBAC).
- Mobilize community to get themselves screened for diabetes, high blood pressure and common cancers.

Step 2

Free screening by ANM at the village level for

- Diabetes
- High Blood Pressure
- Common Cancers

(On a screening day about 30 people can be screened)

Step 3

1. ANM will refer suspected cases to higher health facilities.
2. ASHA will follow up with suspected cases to help with diagnosis, treatment adherence and lifestyle changes.
3. ASHA will encourage formation of patient support groups.

ASHA will follow up with healthy population for:

1. Annual screening of diabetes and hypertension and periodic screening of cancer.
2. Health promotion in the community.
